Plug n Comply

DISTRIBUTED BY INFOMAXIUM, JATHEON'S PLUG N COMPLY™ SOFTWARE IS AN INTEGRATED SOLUTION THAT IS SIMPLE, SECURE, AND SCALABLE, OFFERING ABSOLUTE CONTROL OF CONFIDENTIAL MESSAGING DATA WHETHER IT IS EMAIL OR INSTANT MESSAGING.

Founded in December 2004, Jatheon Technologies has designed the world's first non-intrusive network appliance simplifying archiving, indexing, retrieval, and dynamic monitoring of corporate email and messaging data. Jatheon's Plug n Comply™ software is an integrated solution that is simple, secure, and scalable, offering absolute control of confidential message data.

Managing Exposure to Risk

As much as 70% of corporate intellectual property is stored within the messaging system. Email is mission critical, and often email servers are treated as corporate intelligence repositories – for which they were not designed.

The prospect of storing and retrieving email is daunting, as the sheer volume of email exchanged among enterprises is staggering. Recent research from the Radicati Group, Inc. states that the average corporate email user sends and receives 133 emails a day, equating to 16.4 MB per day of storage. This number is expected to rise to 21.4 MB per user, per day by 2010.

Email is a record; therefore, organizations can no longer rely on mail servers as the repository. Centralized access is essential for all users of an organization, as is the ability to set policies for regulatory and corporate governance.

Jatheon provides the most sophisticated message archiving and search capabilities available giving clients' superior operational performance.

The Highest Standard of Compliance

Jatheon's Plug n Comply™ technology allows organizations to meet and exceed the highest standards of regulatory compliance and operational performance. Our Plug n Comply™ systems solution allow organizations to effectively manage their federal, industry, and corporate compliance commitments including SEC, NASD, NYSE, Sarbanes Oxley, USA Patriot Act, HIPAA, and state regulated insurance legislation requirements. It also gives organizations the capability of real-time auditing and notification capabilities allowing executive management to reduce exposure to risk and respond rapidly on policy enforcement.

Optimized Network Performance

Jatheon delivers real network performance gains with rapid deployment and simplified administration in a dramatically smaller storage footprint. The unique compression and indexing technology that forms the core of Jatheon's Plug n Comply™ solution drives significant storage reduction by using only ten percent of the storage requirement associated with traditional message solutions. Our systems are deployed in hours; not days, requiring no sophisticated IT consulting services. The network appliance model is non-intrusive allowing network performance to remain unaffected during deployment or operation. Our Plug n Comply™ solution interact seamlessly with all major enterprise message platforms including Microsoft Exchange, Lotus Notes, Novell GroupWise, AOL and Yahoo among others.

The Most Sophisticated Compliance Solution Available

Jatheon provides the most sophisticated message archiving and search capabilities available giving clients' superior operational performance. Jatheon's Plug n Comply™ solution index all message contents allowing compliance officers to search and retrieve archived messages rapidly without the need for highly structured and restrictive query formats. Our systems archive continuously giving compliance officers certainty in thwarting deletion and protection from efforts to circumvent corporate audit and oversight. In addition, unique digital finger printing of indexed files ensures that archives are protected from tampering and any attempts to alter data from its original format. Jatheon's Plug n Comply™ solution also fully tracks archive access giving management an unfettered view of when, where, and by who all message audit activity takes place. With one screen the Administrator or Compliance Officer can view the operational status of the system. The Plug n Comply™ solution places all relevant statistics in one simple location including messages processed per hour, policy infractions, and system health data like CPU utilization and disk availability. The combination of all these features makes Jatheon Plug n Comply™ the most advanced compliance solution available today.

The Plug n Comply™ solution places all relevant statistics in one simple location.

Professional Services

Data Migration Services

Migration of historical legacy data has become an issue for many corporations as regulatory, government agency audit, and/or litigation requests demand real-time discovery of multi-year historical content in short time frames.

As organizations consolidate their users of disparate systems into a single data archive, it becomes necessary to migrate the historical archives to a single Plug n Comply™ solution that may support geographically dispersed platforms. Jatheon routinely creates and maintains environments to ingest and process historical legacy mail that may have been previously archived to tape. These environments are designed to isolate the processing of historical messaging from daily operations.

Litigation Support Services

Jatheon's Plug n Comply™ technology offers litigation support to relieve your business information anxiety, whenever electronic discovery issues arise. Jatheon's professional services are built around delivering small and large scale electronic recovery and discovery projects to meet regulatory and litigation requirements. At Jatheon's disposal are scalable and secure hardware/software platforms built to confidentially restore, archive, index, search, secure, produce, and deliver your email and other digital documents for litigation support purposes.

Jatheon's team can also restore data from backup tapes, into the original messaging application; Notes, Exchange or GroupWise and then import the data into the Plug n Comply™ system.
